

**GENEALOGY OF THE ACT OF PERCEPTION
ASSOCIATED AND DISSOCIATED QUANTUM**

What we should not forget is the fact that the Quantum itself is not primordial, but Secondary. This is so because every time each Quantum occurs again and is created in the act in which the non-energetic Form (Idea-Information) cuts the primordial Continual Omni-directed Omni-propagated non-local Infinite Energy into portions by locking each Portion of Energy into a unit “Form” or a unit “Bit”.

We can say that:  Each Quantum dissociated into Unit Bit + Unit Energy

Conversely, Unit Bit + Unit Energy associate with one another to form one Quantum

$$\text{Unit Bit} + \text{Unity Energy} = \text{Quantum}$$

This means that if we manage to split the Quantum or change it into a decay product, we will release a unit of continual non-local Energy, closed in one “Bit” Information.

Namely this “Bit-Energy Dipole” within itself is the so-called “indivisible quantum”.

It is remarkable that a Portion of Continual Energy is locked into a Unity of Discrete Information that equals one Bit.

Consequently, the act of the well-known Reduction of Wave Function – which we imagine as an act of transformation of the Wave Function into Perception Function - is simply an act of Dissociation of the “Bit-Energy Dipole” – wherein the dissociation itself, being a distance, release and isolation of Bit from Energy, bifurcates and diverges the Quantum to Bit information, thus becoming the subject of the Act of Perception in our brain, and the released energy dissociates as the object of the Act of Perception. Yet, consequently, the very dissociation of Bit-Energy Binomial, separating Bit from Energy, transforms the Bit into the subject of the Perceptive Dipole, and the energy into the object of the Perceptive Dipole- where the subjective pole of the Act of Perception starts to vibrate at much higher frequency than the frequency at which vibrates the object of the Act of Perception. Only due to this difference in the frequency the effect of the Perception can occur.

Therefore, until the dissociation of the Quantum and Wave Function does not occur and until Bit and Energy are associated in Unreduced Wave Function – there is no Perception Function at all. *

Information as Possible Ideality, representing the Symmetrical self-identical kingdom, emanates Symmetric Forces, which like Gravity Forces, catch at a certain distance the running away during the dissociation Energy.

The Energy, in turn, as a representative of the Asymmetric Non-self-Identical kingdom, emanates Asymmetrical Anti-gravity Forces, which forces keep the Information at a certain distance and prevent it from running away.

*Bergson, in his “Matter and Memory” arrives at a similar idea.
